FINANCE CONTROLLER NOTES

1. **Capital required:** \$4,875,000 must be available pre-contract (October–December 2026) for furniture procurement and warehouse staging. This is the only major capital outlay before revenue commences.
2. **Pack-in is revenue-neutral:** Month 1 pack-in cost (\$502,200) is more than offset by Month 1 revenue (\$3,150,000). No additional line-of-credit draw required.
3. **Breakeven is fast:** 3.25 months from first revenue (4 months from contract start). Capital exposure eliminated by Month 4.
4. **Cash flow is extremely stable:** Months 2–47 generate a consistent \$1,656,750/month net. No seasonal variation. No client concentration risk (single master contract with Infrastructure BC / NH).
5. **Pack-out is pre-funded:** By Month 48, cumulative position far exceeds pack-out cost. No reserve fund required — operating cash flow covers it.
6. **Tax planning:** At 11% CCPC SBD rate, tax bill over 48 months is approximately \$8,105,548. Should be managed through quarterly installments.
7. **Furniture as asset:** \$4,875,000 furniture investment is a depreciable capital asset (CCA Class 8, 20% declining balance). Reduces taxable income over time. Consult tax counsel on optimal depreciation strategy.
8. **Return on peak capital deployed:** \$73,686,800 gross profit on \$4,875,000 peak capital exposure = **1,511% ROI over 48 months** (≈313% annualized).
